Netezza stored procedures are used to encapsulate the business logic and same time handle the exceptions. SQL provides the power to get and update the database information on the host server, and the procedure language provides the logic for if-then-else branching and application processing on the data.

Working with Netezza Stored Procedures - DWgeek.com

Netezza Data Load using External tables These are tables stored as flat files on the host or client systems and not in the Netezza appliance database. Create table on top of the flat file that needs to be loaded to Netezza tables, then use that external table to load target table in Netezza appliance.

server in Oracle Data Integrator. Within this server, a database/owner pair maps to an Oracle Data Integrator physical schema. Oracle Data Integrator uses Java Database Connectivity (JDBC) to connect to a Netezza database.

Netezza - Oracle Cloud

With the Netezza R Library package, it is possible to run any SQL query on the Netezza system and return its results into the R client by using the `nzQuery()` and `nzScalarQuery()` functions. The `nzQuery()` function returns a `data.frame` object with the query results, whereas the `nzScalarQuery()` function returns the query result forced to a single scalar value.
